Bespoke Portastor REB for RETB Project

As part of the upgrade/renewal program for Ipswich – Lowestoft, Portastor have developed, designed, manufactured and installed a series of bespoke REB's housing the RETB (Radio Electronic Token Block) equipment required for the single road line.

The contract includes the supply of 5No new base sites and the life-extension refurbishment of 4No. existing REB units including upgrading HVAC and carrying out roof-leak and cosmetic repairs.

The new build REB contract includes the trackside delivery and installation using Hiab and crane plant.
